

Il Dott. Carmine Elia dell' Università degli Studi di Trieste and INFN, Trieste

terrà un seminario dal titolo :

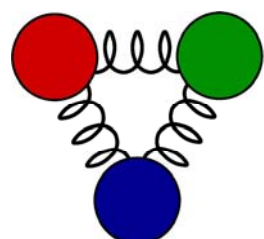

"MEASUREMENT OF THE COLLINS AND TWO- HADRON TRANSVERSE SPIN ASYMMETRIES AT

Abstract: The transversity distribution function can be accessed in semi-inclusive deep inelastic scattering (SIDIS) off transversely polarized targets by measuring the azimuthal distributions of single hadrons or hadron-pairs in the final state. The COMPASS collaboration has measured these asymmetries for polarised deuteron (^6LiD) and proton (NH_3) targets and the results are reviewed in this talk.
