Spin-dependent Fragmentation Functions

Rainer Jakob, University of Wuppertal

Spin-dependent Fragmentation Functions

Rainer Jakob, University of Wuppertal

<u>outline of the talk:</u> (first version)

- systematic scheme for fragmentation functions (10 min)
- model calculations (10 min)
- model-independent bounds (10 min)
- processes involving fragmentation functions (10 min)
- presentation of a database on FF (5 min)

Spin-dependent Fragmentation Functions

Rainer Jakob, University of Wuppertal

outline of the talk: (more realistic time schedule)

- systematic scheme for fragmentation functions (20 min)
- model calculations (20 min)
- model-independent bounds (10 min)
- processes involving fragmentation functions (20 min)
- presentation of a database on FF (10 min)

Spin-dependent Fragmentation Functions

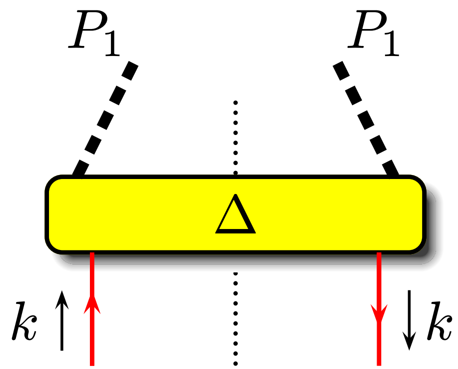
don't worry !

the number of independent fragmentation functions is limited

(actually, to just a few at leading twist)

and there is a simple systematics behind

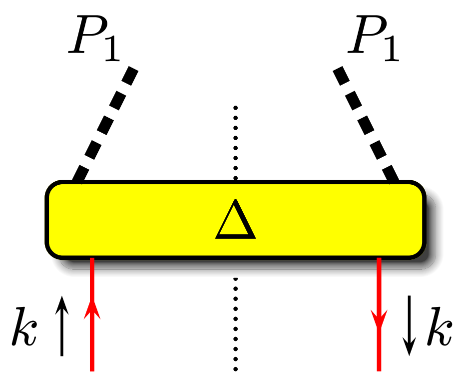
definition of correlation function for fragmentation process $q \to h_1 \quad X$



Soper, Collins

$$\Delta_{ij}(k, P_1, \quad) = \sum_X \int \frac{d^4\xi}{(2\pi)^4}\, e^{ik\cdot\xi}\, \langle 0|\mathcal{U}(0,\xi)\psi_i(\xi)|P_1, \quad ; X\rangle\langle P_h, \quad ; X|\overline{\psi}_j(0)|0\rangle$$

definition of correlation function for fragmentation process $q \to h_1 \quad X$



Soper, Collins

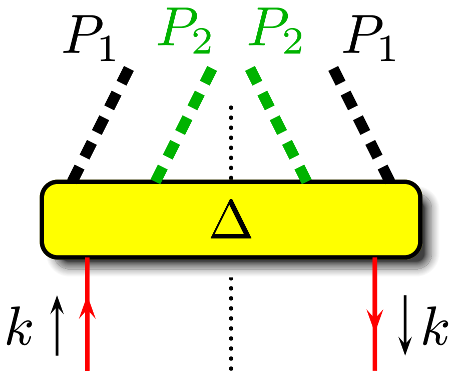
$$\Delta_{ij}(k, P_1, \quad) = \sum_X \int \frac{d^4\xi}{(2\pi)^4}\, e^{ik\cdot\xi}\, \langle 0|\mathcal{U}(0,\xi)\psi_i(\xi)|P_1, \quad ;X\rangle\langle P_h, \quad ;X|\overline{\psi}_j(0)|0\rangle$$

Δ is a 4×4 matrix in Dirac space, and depends on the momentum vectors:

k, P_1,

and possibly spin vectors S (spin-1/2) , or spin vector and tensor S, T (spin-1), etc.

definition of correlation function for fragmentation process $q \to h_1 h_2 X$



Soper, Collins

$$\Delta_{ij}(k, P_1, P_2) = \sum_X \int \frac{d^4\xi}{(2\pi)^4}\, e^{ik\cdot\xi}\, \langle 0|\mathcal{U}(0,\xi)\psi_i(\xi)|P_1, P_2; X\rangle\langle P_h, P_2; X|\overline{\psi}_j(0)|0\rangle$$

Δ is a 4×4 matrix in Dirac space, and depends on the momentum vectors:

k, P_1, P_2

and possibly spin vectors S (spin-1/2) , or spin vector and tensor S, T (spin-1), etc.

$\Longrightarrow$ construct most general ansatz Soper/Ralston, Mulders/Tangerman

for instance for one spin- 0 hadron in the final state:

$$\Delta(k, P_h) = B_1 M_h + B_2 \not{P}_h + B_3 \not{k} + (B_4/M_h)\, \sigma_{\mu\nu} P_h^{\mu} k^{\nu}$$

with $B_i = B_i(P_h \cdot k, k^2)$

$\Longrightarrow$ construct most general ansatz

Soper/Ralston, Mulders/Tangerman

for instance for one spin- 0 hadron in the final state:

$$\Delta(k, P_h) = B_1 M_h + B_2 \not{P}_h + B_3 \not{k} + (B_4/M_h)\, \sigma_{\mu\nu} P_h^\mu k^\nu$$

with $B_i = B_i(P_h \cdot k, k^2)$

only terms which are in accordance with constraints from:

1.) hermiticity 2.) behavior under parity transformation

note: B_4 is T-odd, i.e. it would be forbidden by a constraint from the behavior of Dirac fields under time-reversal, if there were no final state interactions

$\Longrightarrow$ construct most general ansatz Soper/Ralston, Mulders/Tangerman

for instance for one spin-1/2 hadron in the final state:

$$\Delta(k, P_h, S) = B_1 M_h + B_2 \not{P}_h + B_3 \not{k} + (B_4/M_h)\, \sigma_{\mu\nu} P_h^\mu k^\nu$$
$$+ i\, B_5 (k \cdot S)\gamma_5 + B_6 M_h \not{S}\gamma_5 + (B_7/M_h)(k \cdot S)\, \not{P}_h \gamma 5$$
$$+ (B_8/M_h)(k \cdot S)\, \not{k}\gamma_5 + i\, B_9\, \sigma_{\mu\nu}\gamma_5 S^\mu P_h^\nu$$
$$+ i\, B_{10}\, \sigma_{\mu\nu}\gamma_5 S^\mu k^\nu + i\, (B_{11}/M_h^2)(k \cdot S)\sigma_{\mu\nu}\gamma_5 k^\mu P_h^\nu$$
$$+ (B_{12}/M_h)\, \epsilon_{\mu\nu\rho\sigma}\gamma^\mu P_h^\nu k^\rho S^\sigma$$

with $B_i = B_i(P_h \cdot k, k^2)$

only terms which are in accordance with constraints from:

1.) hermiticity 2.) behavior under parity transformation

note: B_4,B_5, and B_{12} are T-odd, i.e. they would be forbidden by a constraint from the behavior of Dirac fields under time-reversal, if there were no final state interactions

fragmentation functions are obtained from the correlation function Δ

by projection with Dirac matrices Γ,

and integration over components of the quark momentum

$$\Delta^{[\Gamma]}(z) \equiv \frac{1}{4z} \int dk^+ \int d^2\mathbf{k}_T \; Tr\,[\Delta\Gamma]\Big|_{k^-=P_h^-/z}$$

or

$$\Delta^{[\Gamma]}(z, -z\mathbf{k}_T) \equiv \frac{1}{4z} \int dk^+ \; Tr\,[\Delta\Gamma]\Big|_{k^-=P_h^-/z\;;\mathbf{k}_T}$$

with the Dirac matrices $\Gamma \in \{\gamma^-,\ \gamma^-\gamma_5,\ i\sigma^{\alpha -}\gamma_5, \ldots,$ higher twist$\}$

fragmentation functions are obtained from the correlation function Δ

sitemap (this page)

text on fragmentation functions (../FFdatabase/text.html)

- parton distribution functions (PDFs)
- unintegrated PDFs
- fragmentation functions (FFs)
- unintegrated FFs
- multiple-hadron FFs
- models calculations
- target fragmentation and fracture functions

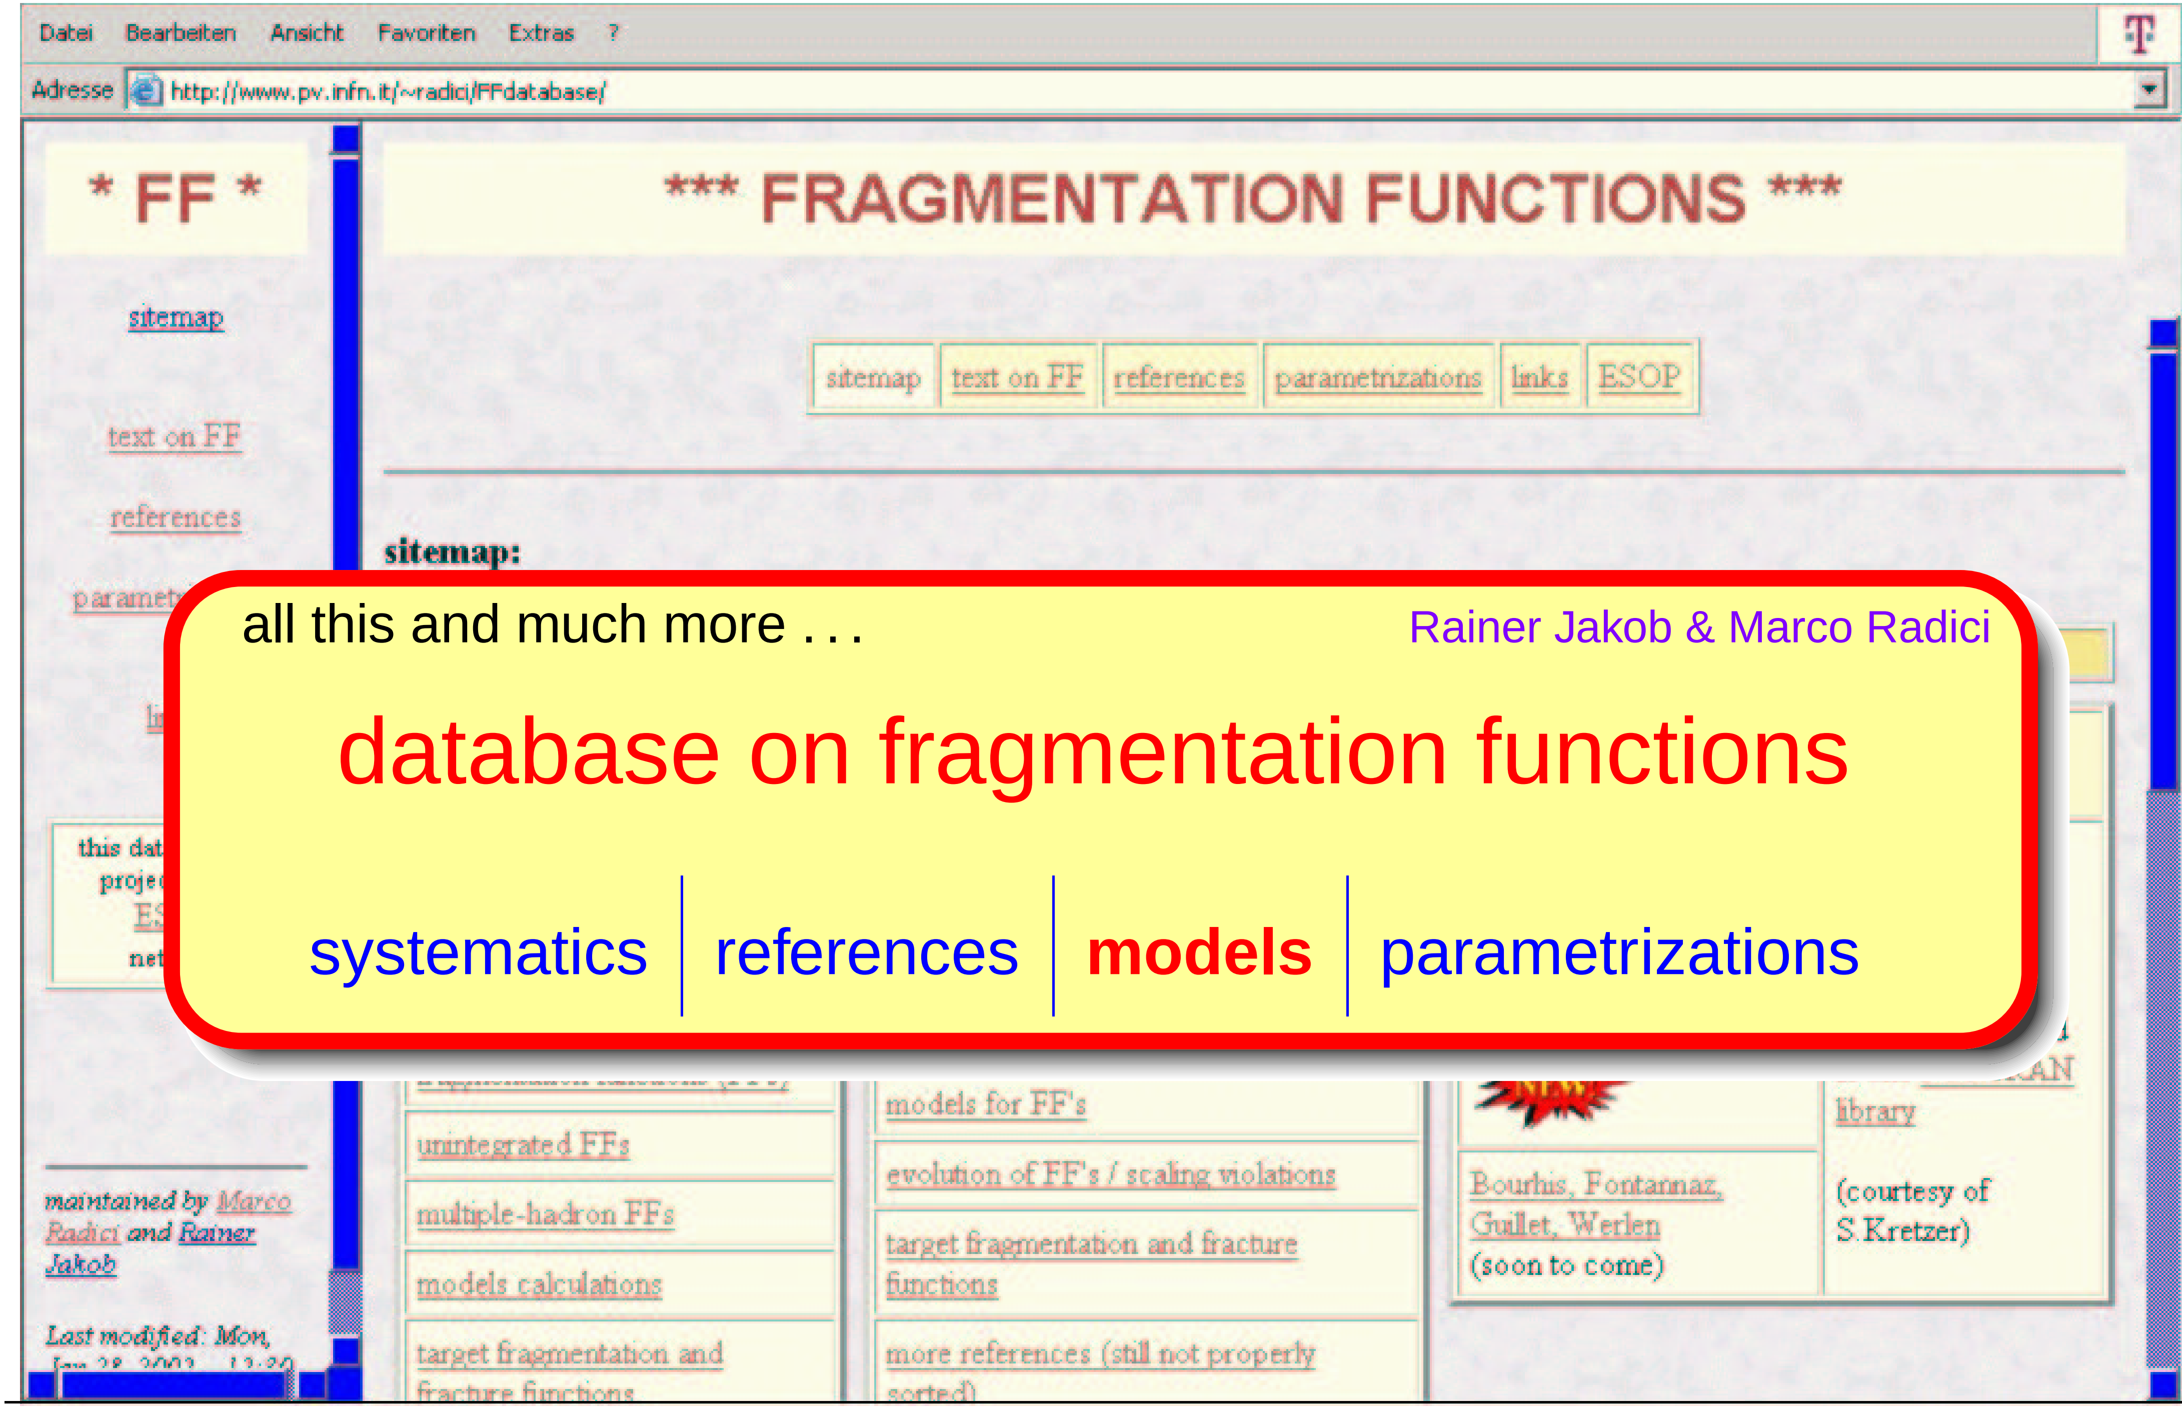
references related to fragmentation functions (../FFdatabase/references.html)

- operator definitions of PDFs and FFs
- information on PDF's / parametrizations
- information on FF's / parametrizations
- models for FF's
- evolution of FF's / scaling violations
- target fragmentation and fracture functions
- more references (still not properly sorted)

parametrizations (../FFdatabase/parametrizations.html)

- Stefan Kretzer NEW!
- Kniehl, Kramer, Pötter NEW!
- Bourhis, Fontannaz, Guillet, Werlen (soon to come)

NEW! all three combined in one FORTRAN library (courtesy of S.Kretzer)



all this and much more . . .

summary

one hadron FF

	without $\mathbf{k}_T$	with $\mathbf{k}_T$
spin-0	D_1	$H_1^\perp$
spin-1/2	D_1, G_1, H_1	$D_{1T}^\perp, H_1^\perp, G_{1T}, H_{1L}^\perp, H_{1T}^\perp$
spin-1	$D_1, D_{1LL}, G_1, H_1, H_{1LT}$	$D_{1T}^\perp, H_1^\perp, G_{1T}, H_{1L}^\perp, H_{1T}^\perp,$ $D_{1T}^\perp, D_{1LT}, D_{1TT}, G_{1LT}, G_{1TT},$ $H_{1LL}^\perp, H'_{1LT}, H_{1LT}^\perp$

two hadron FF

	without $\mathbf{k}_T$	with $\mathbf{k}_T$
spin-0	$D_1, H_1^\sphericalangle$	$G_1^\perp, H_1^\perp$

higher twist

conclusions

- the number of independent fragmentation functions is limited and there is a simple systematics behind

- spin-dependent fragmentation functions are not only a tool for the extraction of distribution functions, but provide the key information for understanding hadronic structure
